

user see u01 as a folder

We say "**extend** /u01 ", the relevant chain is:

Azure disk => PV
=> VG (dbvg) =>
LV u01 =>
filesystem /u01

Why LVM??

you should use LVM (Logical Volume Manager) if you need the flexibility to resize partitions dynamically, combine multiple hard drives into one storage pool, or take live snapshots for backups

lsblk command output:

Azure Portal Mapping

The terminal output shows the following disk information:

NAME	MAJ:MIN	RM	SIZE	RO	TYPE	MOUNTPOINT
sda	8:0	0	1.8T	0	disk	
-dbvg-u01	252:3	0	1.8T	0	lvm	/u01
sdb	8:16	0	200G	0	disk	
-root	8:16	0	200G	0	part	/
-rootvg-rootlv	252:0	0	128.7G	0	lvm	/
-rootvg-crashlv	252:1	0	10G	0	lvm	/var/crash
-sdb3	8:19	0	170G	0	part	
-rootvg-rootlv	252:0	0	128.7G	0	lvm	/
-rootvg-swap	252:2	0	16G	0	lvm	[SWAP]
-sdb14	8:30	0	4M	0	part	
-sdb15	8:31	0	495M	0	part	/boot/efi
-sdc	8:32	0	100G	0	disk	
-dbvg-u01	252:3	0	1.8T	0	lvm	/u01

The screenshot shows the Azure Portal configuration for disks. The 'OS disk' section shows a single disk with a size of 200 GiB. The 'Data disks' section shows two attached disks:

LUN	Disk name	Storage type	Size (GiB)	Max IOPS	Max throu
0	dsk-prod-isdb-uaen-fisdbd01-disk0	Standard SSD LRS	1800	500	100
1	dsk-prod-isdb-uaen-fisdbd01-disk1	Standard SSD LRS	100	500	100

COmmands to be double sure:

```
sudo ls -l /dev/disk/azure/scsi1/  
sudo pvs  
sudo vgs  
sudo lvs -o lv_name,vg_name,lv_size,lv_attr,devices
```

Enable succeeded:

[stdout]

[stderr]

From above SS: /dev/sda has 110 GB Free which can be mounted
to /u01

NEXT STEP: INcrease disk Size of any one of the Disk ==> rescan disk ==> Resize LVM physical volume ==> extend
Logical volume ==> extend /u01 filesystem ==> check space df -Th /u01
